Rohit Chhiber NASA GSFC & U Delaware Arcadi Usmanov, NASA GSFC & U Delaware William Matthaeus, U Delaware Melvyn Goldstein, SSI Oral

A global magnetohydrodynamic model of the solar wind with turbulence transport is used to investigate the properties of an extended, fragmented, "frothy" Alfven zone in the young solar wind. We focus on a particular property which is of interest to the PUNCH mission - the characteristic spatial scale of patches/blobs of sub-Alfvenic solar wind, and the variation of this scale with heliocentric latitude and distance.
