

# WISE program: Observation, Modeling and Application for Urban Meteorology in Seoul

Seung On Hwang

(On behalf of Director Gangwoong Lee)

WISE / HUFS / KMA

차세대도시농림융합기상사업단  
(Weather Information Service Engine)

**WISE has not been doing any research on Air Quality until now !**

History along with WMO

- '13: WISE submitted to 16<sup>th</sup> WMO CAS
- '14: Discussion with WMO GAW
- '15: with Dr. Alexander Baklanov

❑ **Project period** : 2012~2019

❑ **Total budget** : US\$85 million (Assessed every year)

-Actually received **half** of it from Gov. until now.

-'17 budget : US\$5.5 million

❑ **Personnel** : Total 48 (43 researchers + 5 admin.)

❑ **Organization**

3 Deps. of research + 1 Dep. of human resources

Modeling & Computer

Urban Observation

Application

Adm.

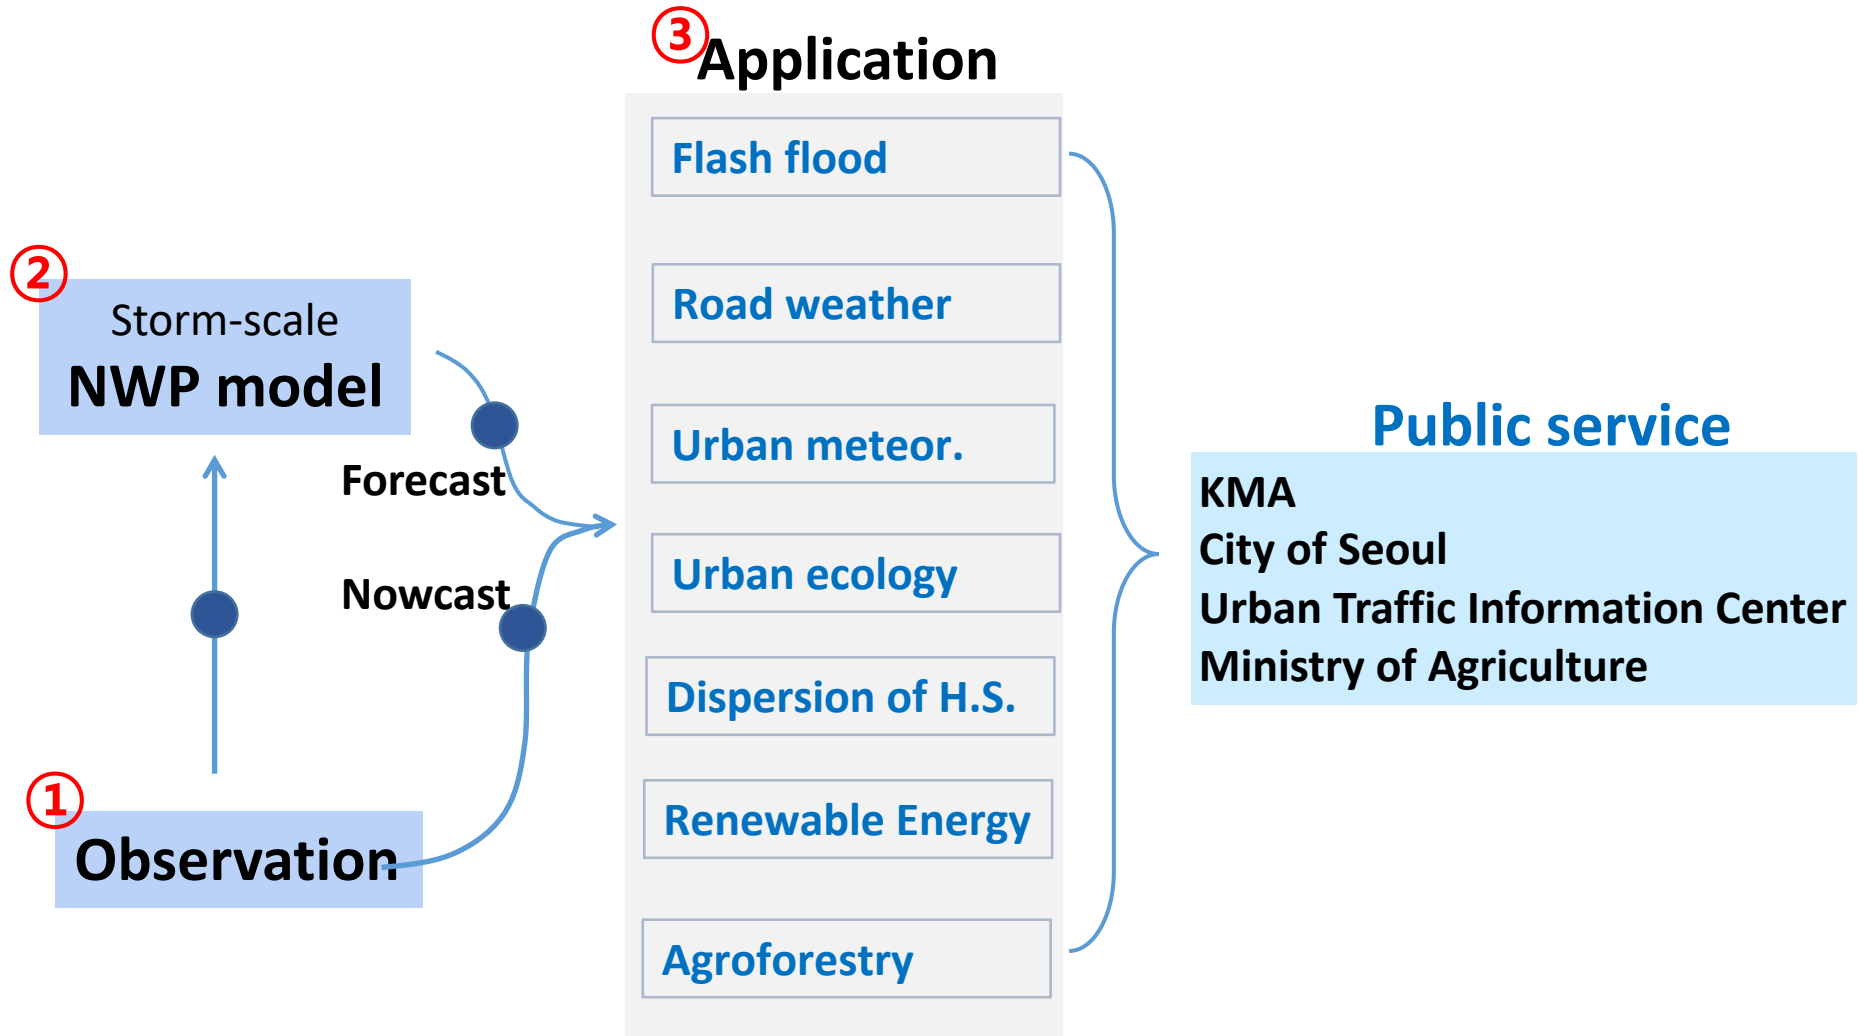

**HUFS**

Hankuk Univ. of Foreign Studies

**WISE**

**KMA**

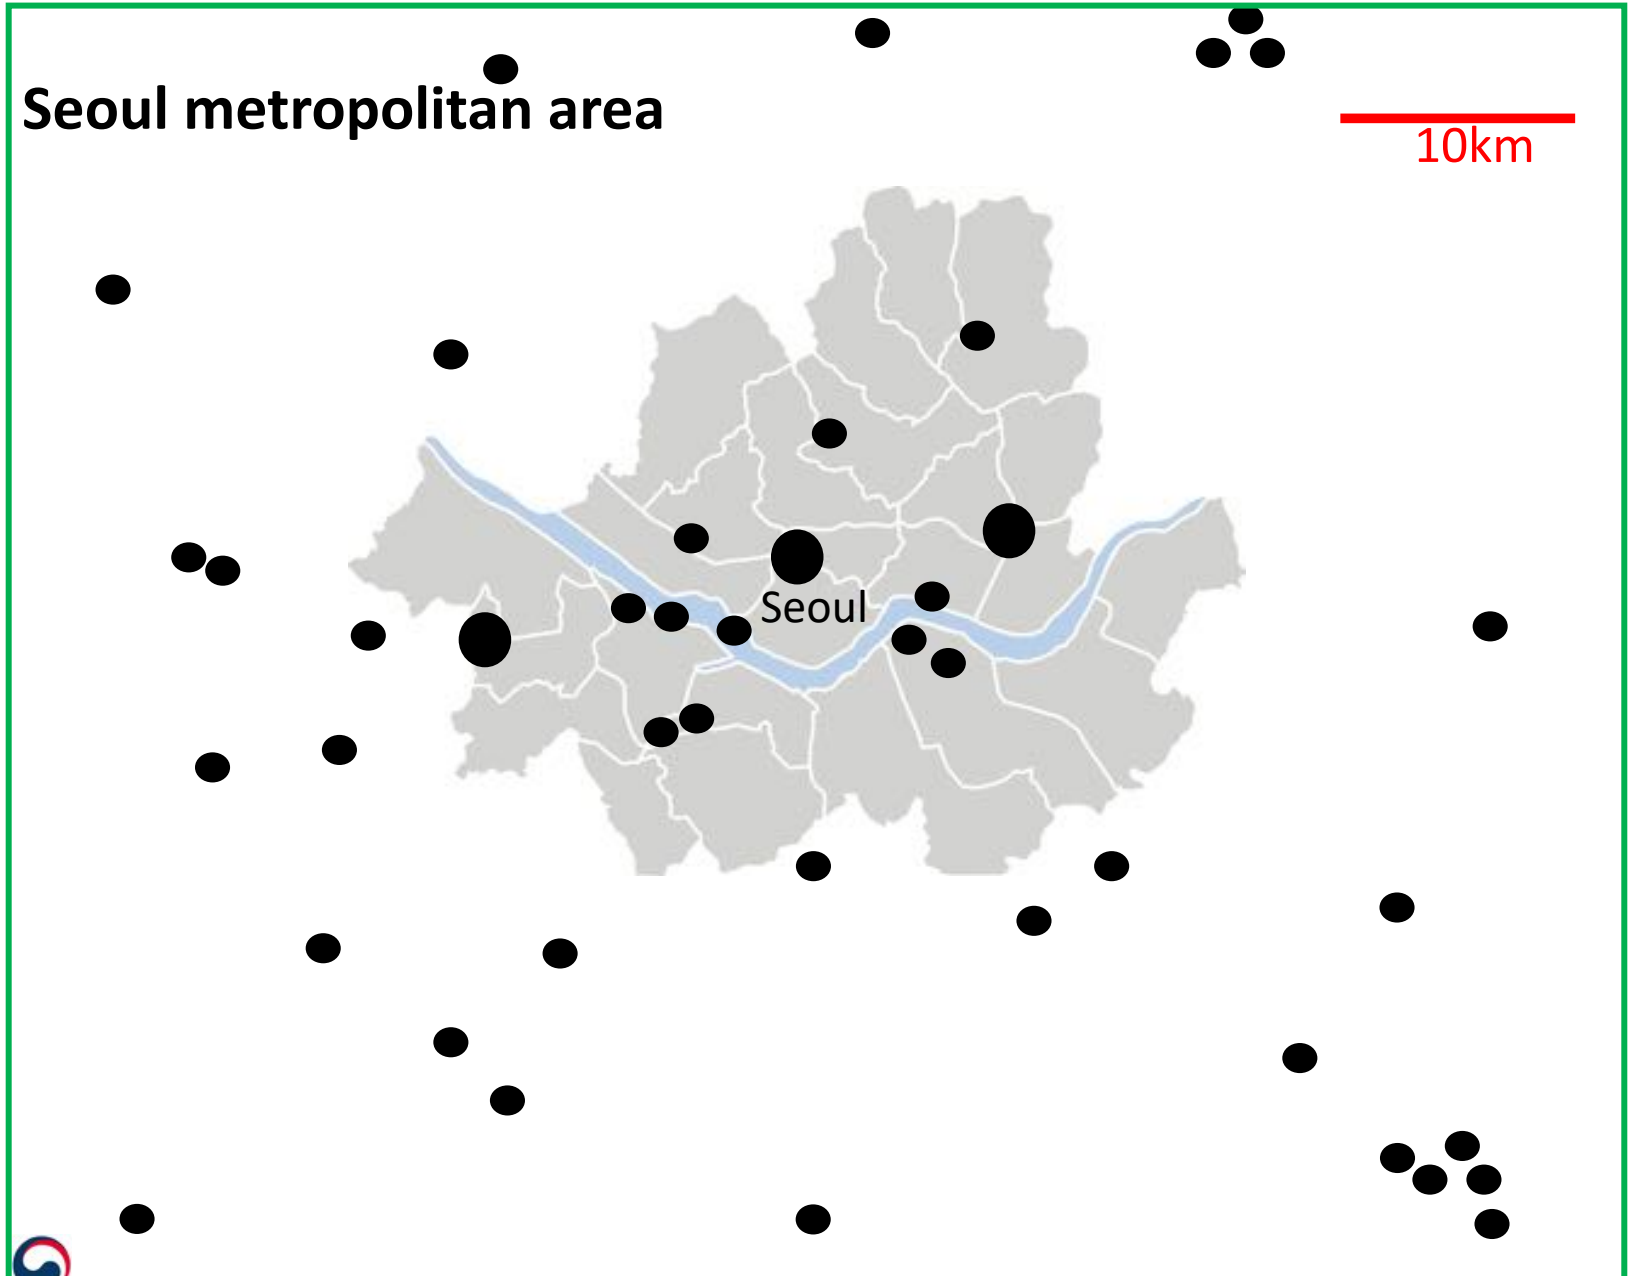

## **①** Observation

**Finally, all observation sites have been installed late 2016.  
are now running well !**

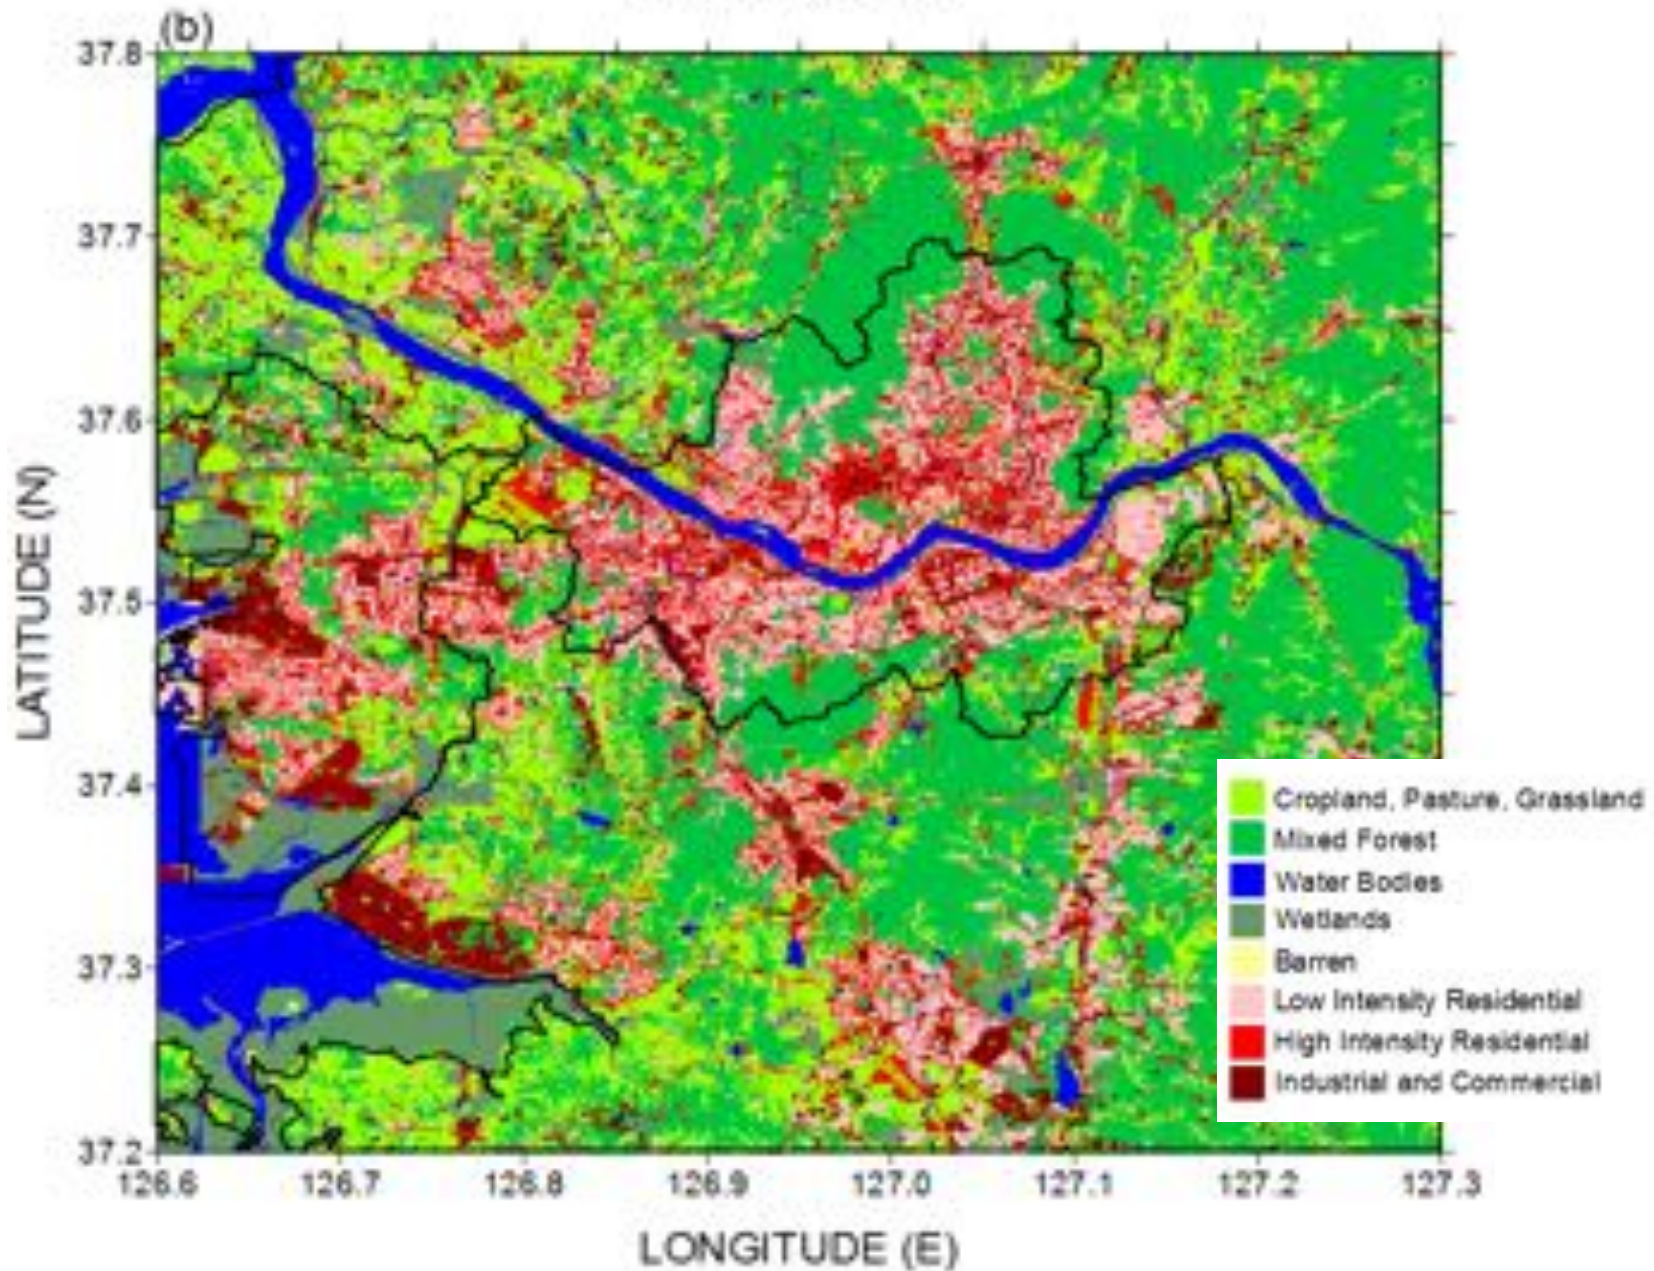

**Its total cost is approximately US\$7 million.**

Seoul metropolitan area

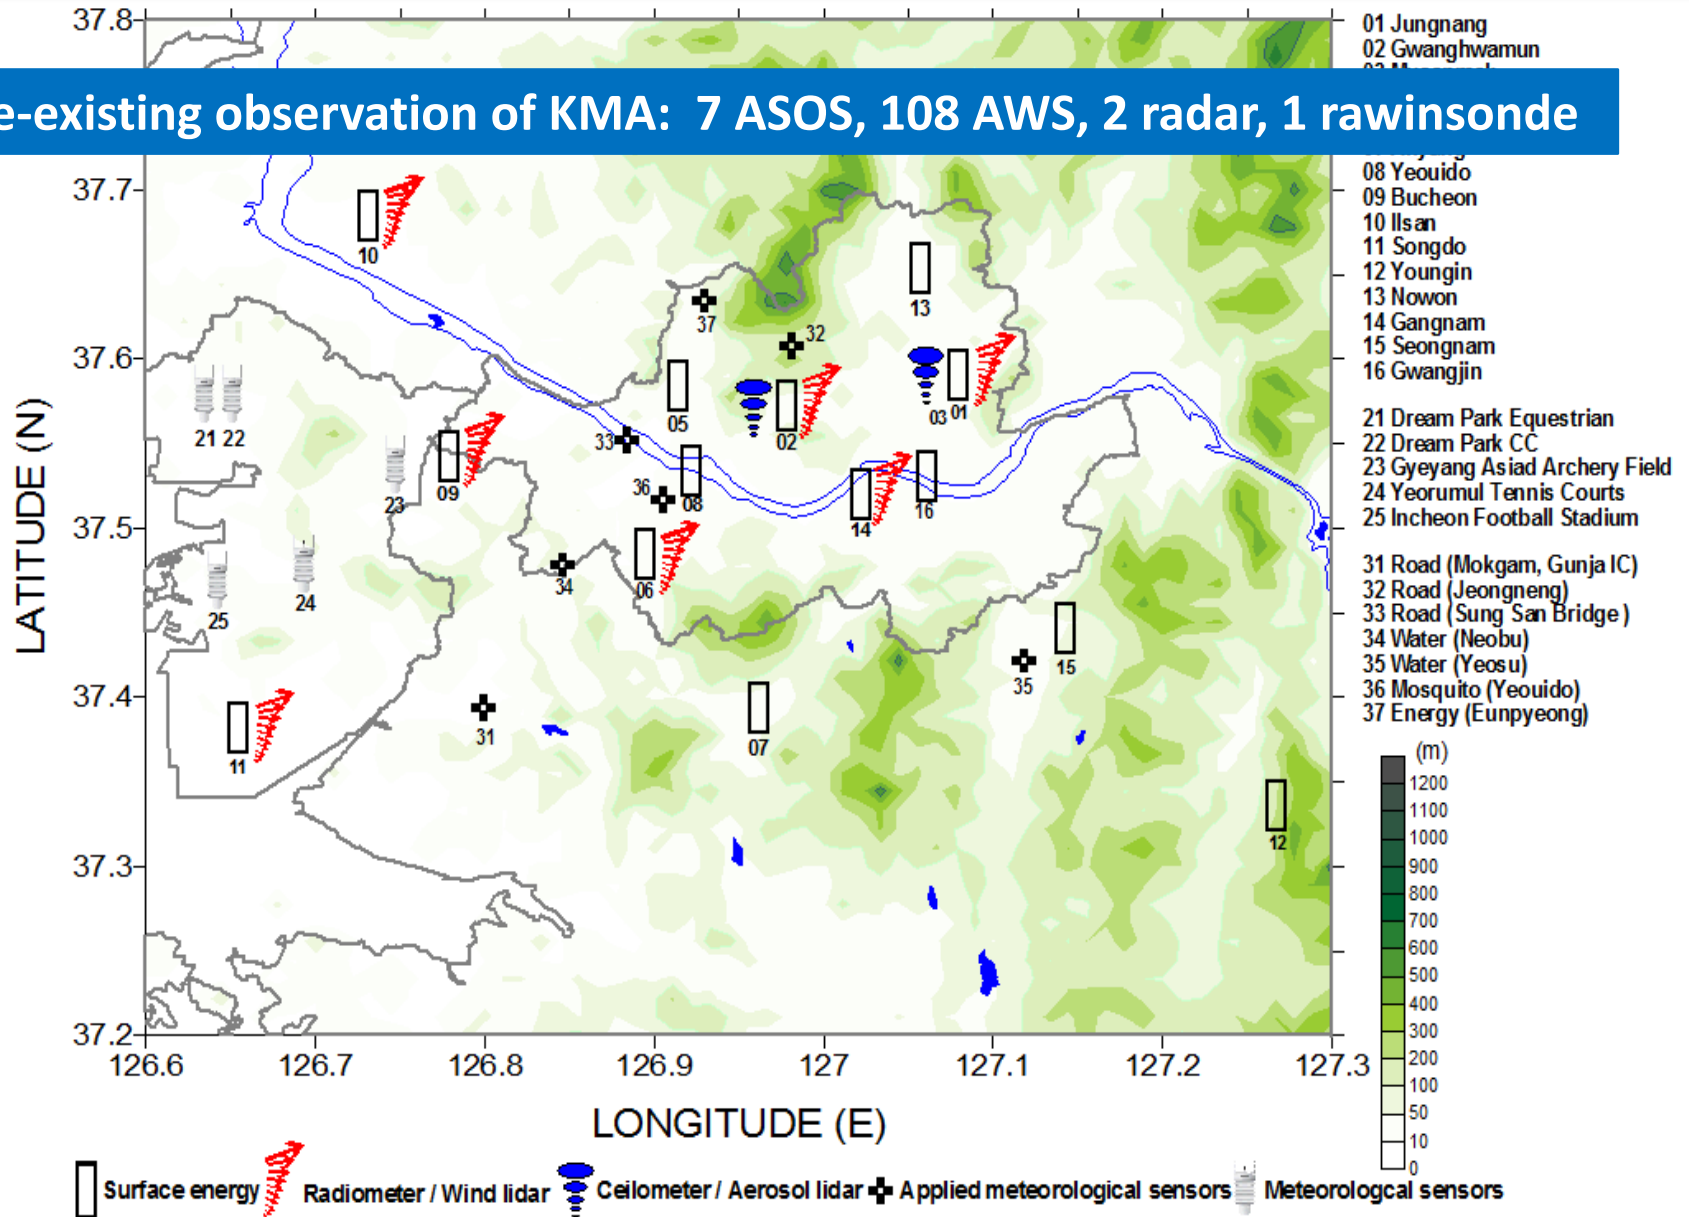

10km

Pre-existing observation of KMA: 7 ASOS, 108 AWS, 2 radar, 1 rawinsonde

Systems	Sensor or specification	
Surface energy balance obs. system (14 sites)	Sites	rural, residential, commercial, industrial, apartment, river (1.5~18.5m)
	Sensor	T, RH, Wind, $\uparrow\downarrow$ short/longwave radiation, CO <sub>2</sub> /H <sub>2</sub> O IR gas analyzer, sonic anemometer, T <sub>surf</sub> , rain gauge, T <sub>water</sub> (2), IR thermometry (6), Large Aperture Scintillometer(1 set). T <sub>surf</sub> monitoring system(2 sets)
Meteo. Obs. system for profile	Ceilometer (2)	Wavelength: 910 nm / Backscatter by aerosol (up to 15 km, 10 m vertical resolution, 1-min temporal resolution), cloud bottom heights (3 level)
	Aerosol lidar (2)	Wavelength: 532 nm (parallel, cross-polarized), 1064 nm / Backscatter by aerosol (up to 16 km, 3.75 m vertical resolution, 1-hr resolution), depolarization ratio, backscatter
	Radiometer (7)	Water vapor (22~31 GHz, 7 channels), T (51~58 GHz, 7 channels) T <sub>B</sub> for each channel, vertical profile of T, RH, liquid water content
	Wind lidar (6)	Wavelength: 1532 nm, Wind speed and direction (up to 6,000 m, 100 m vertical resolution, 10-min interval)
Applied meteo. Obs. system	Road (6)	Wind, T, RH, Precip., Precip. detection, insolation, net radiometer, road temperature and status, salinity, water depth
	Water quality (2)	T <sub>water</sub> , pH, conductivity, dissolved oxygen, salinity, turbidity, chlorophyll-a, water depth
	Mosquito (3)	Mosquito collector
	Greenhouse gas (1)	CH <sub>4</sub> concentration, total radiation, diffuse radiation
	Agrometeo.(4)	Shortwave/longwave radiation, T and RH, albedo, leaf wetness, soil moisture content, wind speed and direction, precipitation, T <sub>soil</sub>

Ceilometer

Aerosol Lidar

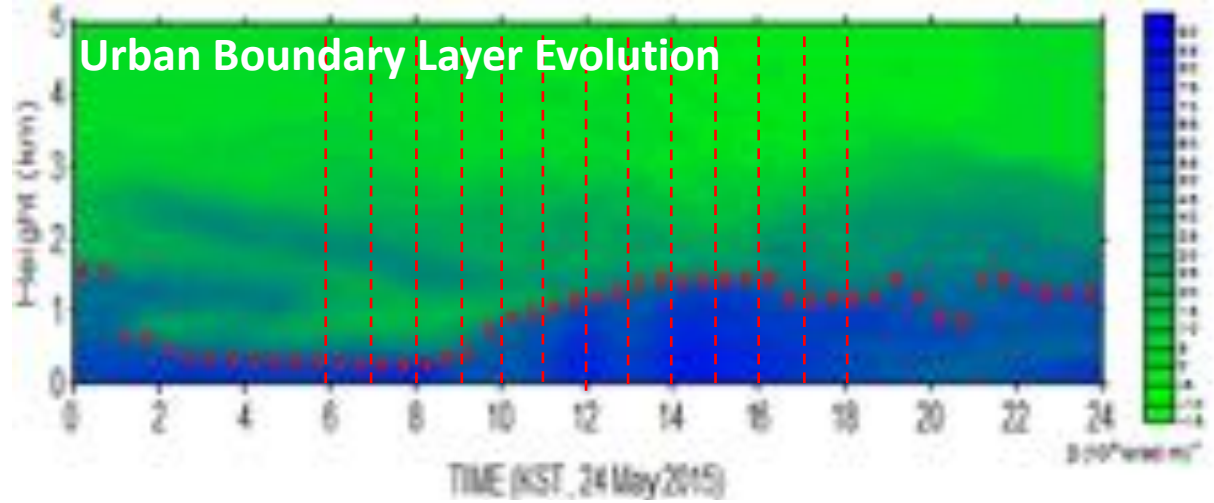

Wind Lidar

Microwave Radiometer

(Ceilometer/Aerosol Lidar)

(Microwave Radiometer)

(Wind Lidar)

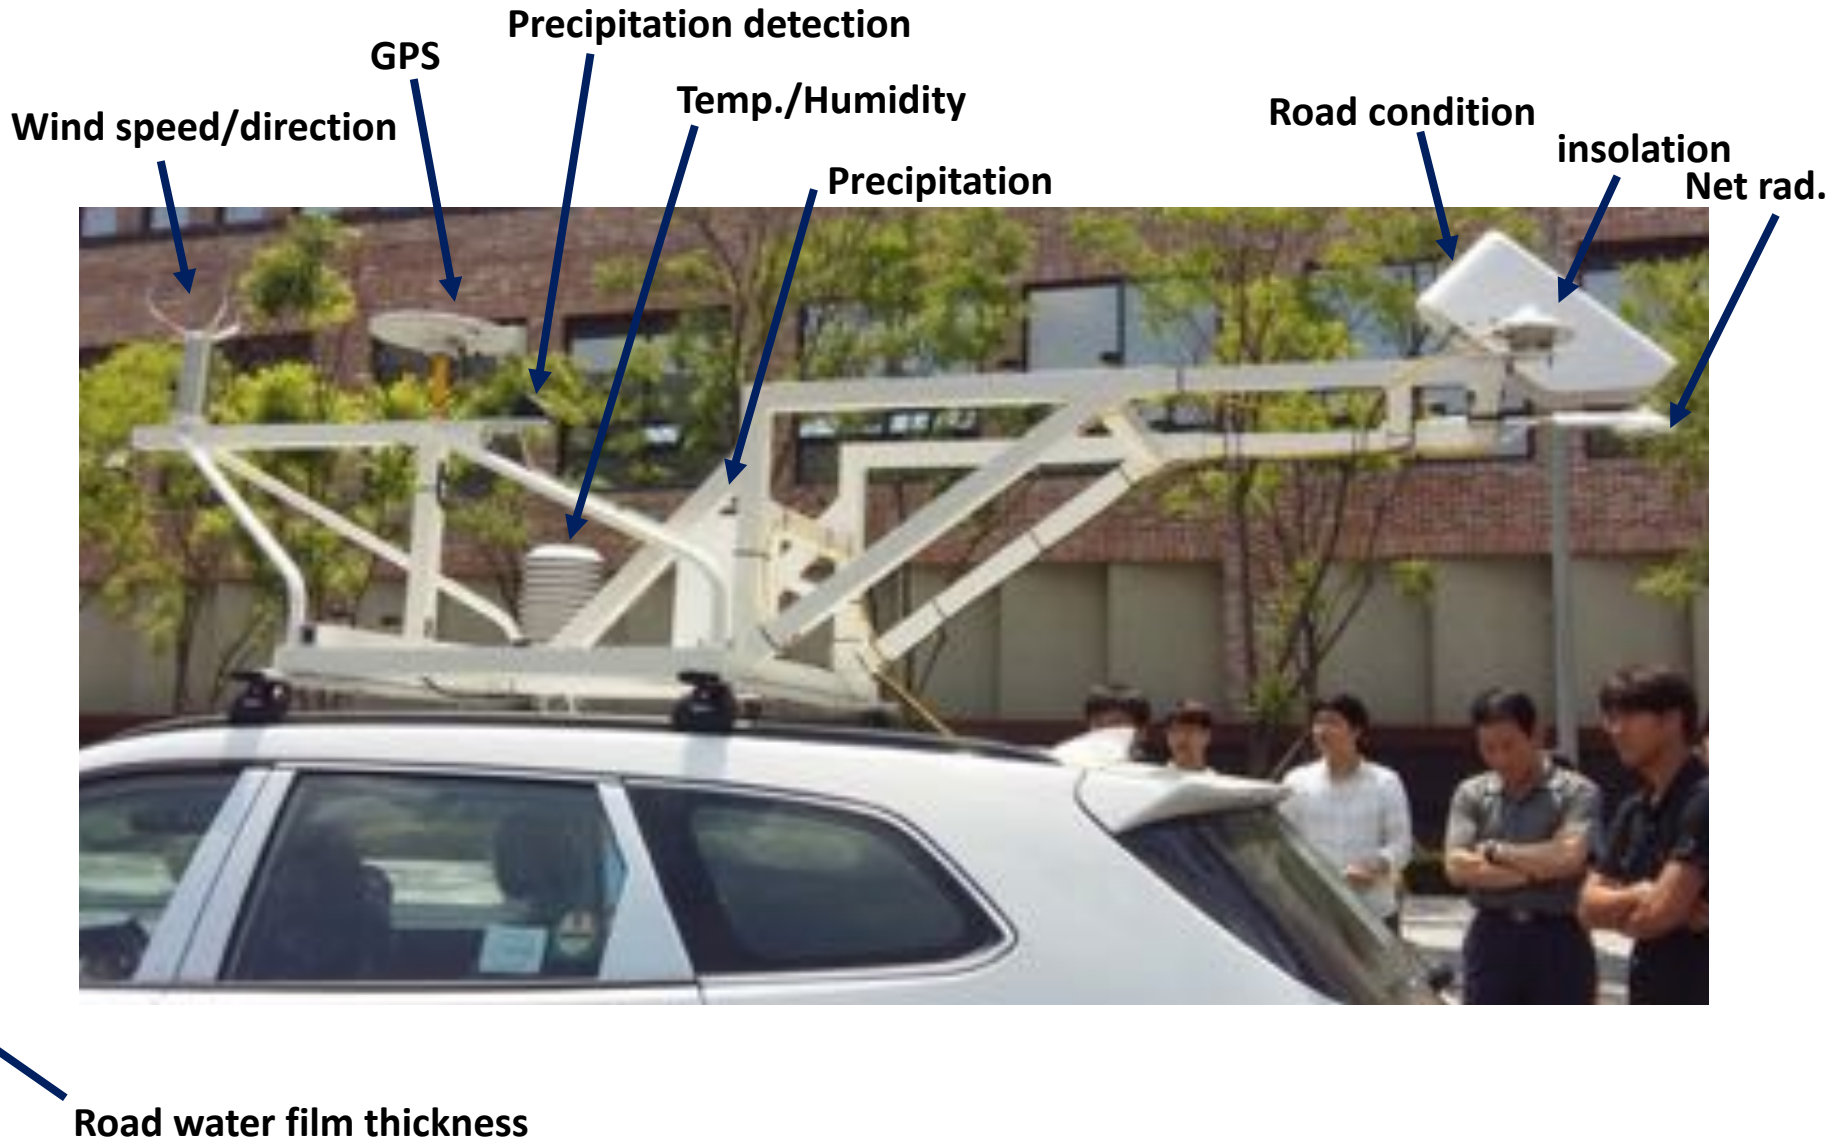

# 2) AWS + Surface energy balance system

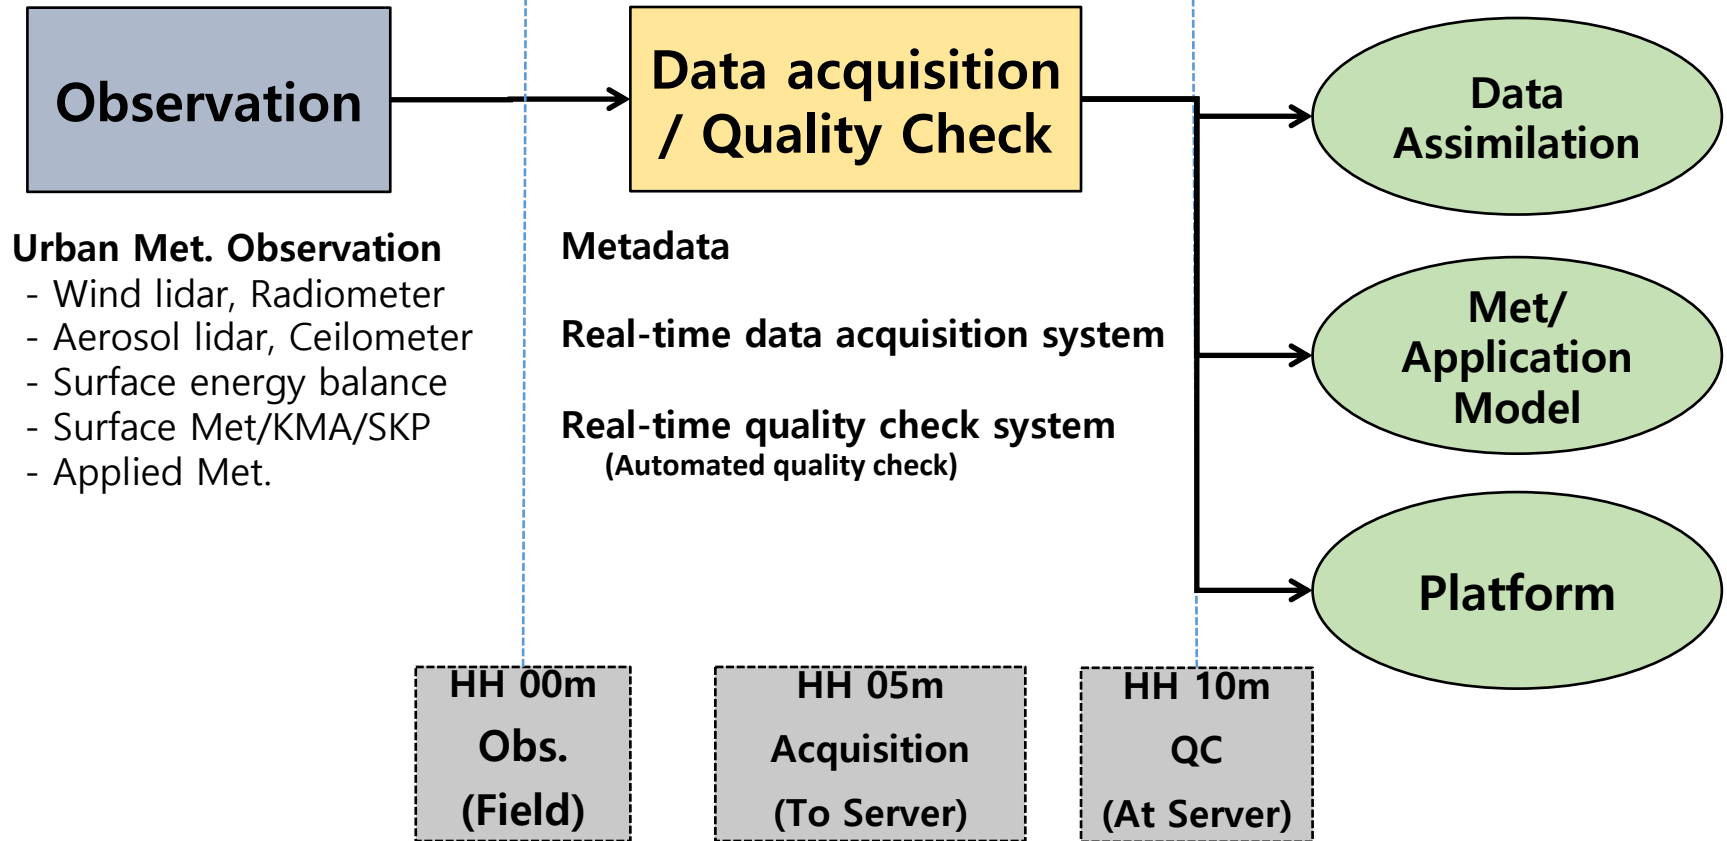

# 3) Mobile Road & Urban Meteo. Obs. System

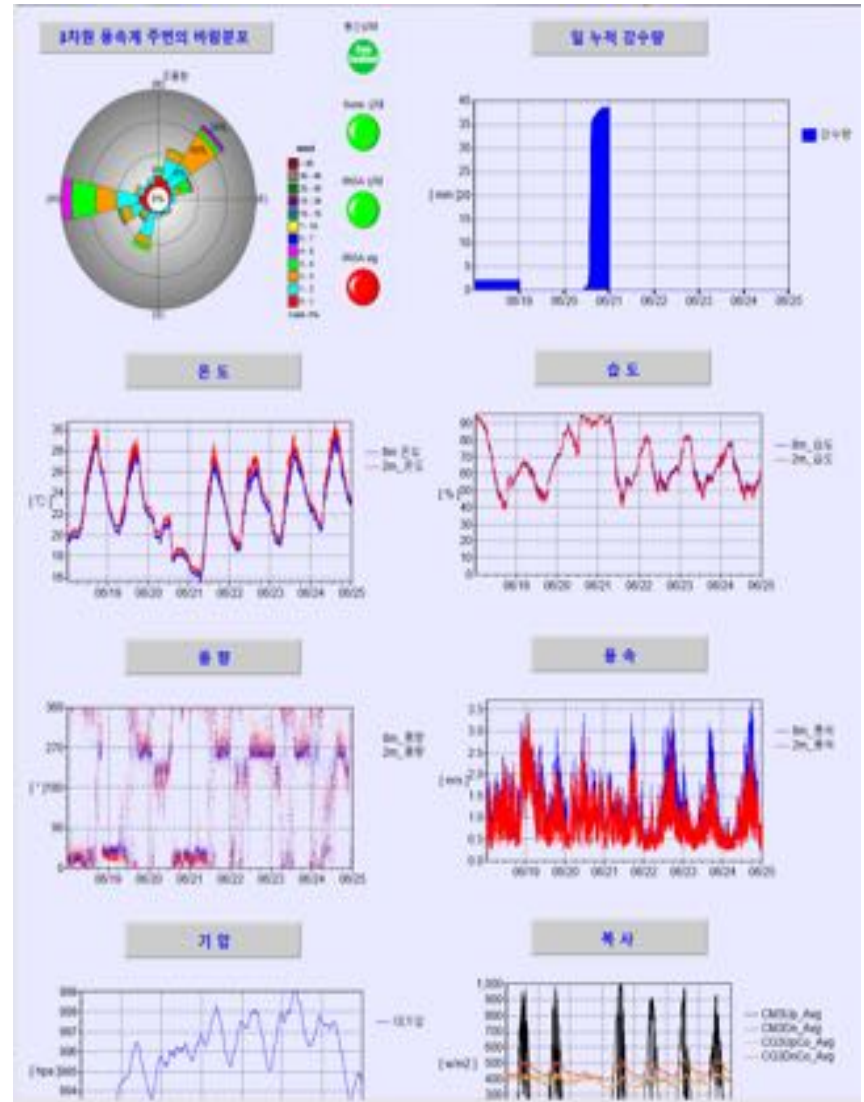

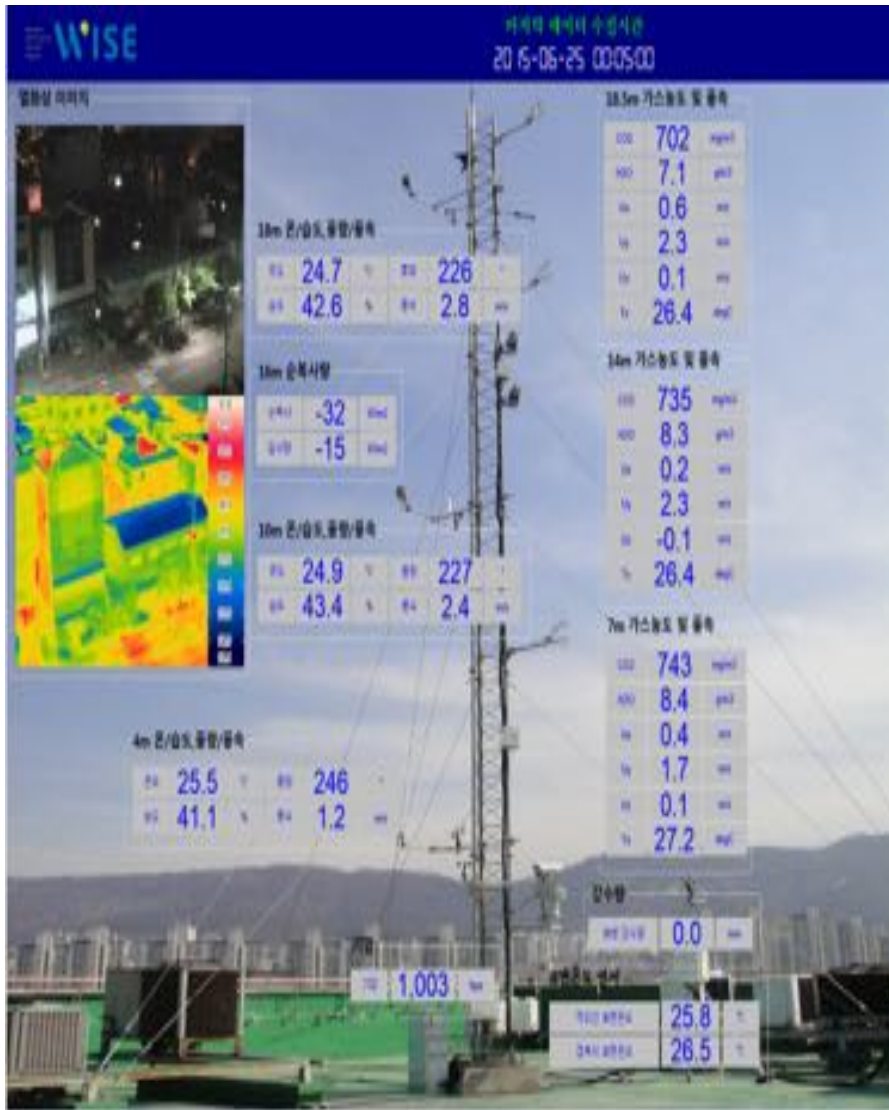

## WISE is providing observation data to KORUS-AQ

(Muller et al., 2013; Song et al., 2014)

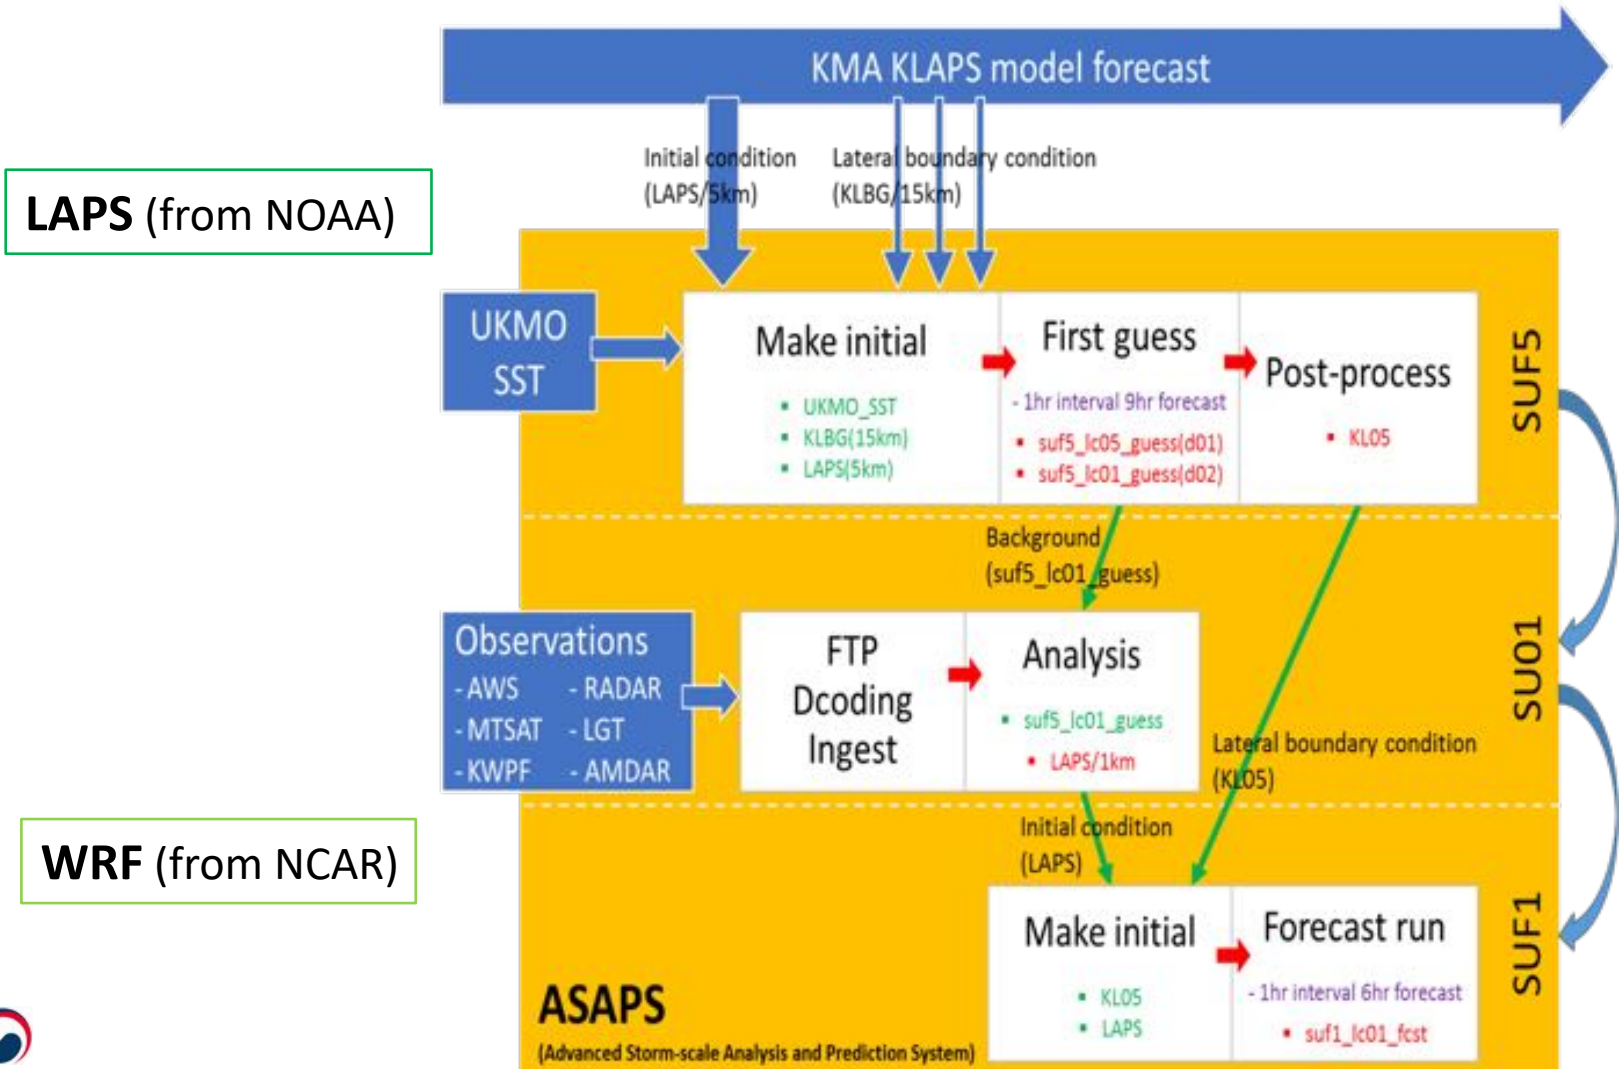

②

Storm-scale  
**NWP model**

**(ASAPS)**

1-km resolution, up to 6-hr forecast, every hour

Predicting severe weather on Seoul and metropolitan area to support meteorological prediction information to application models

[HomePage](#)   [소개](#)   [About](#)   [Administration](#)

## ASAPS V1.0

Mon Jun 27 13:55:05 GMT+0900 (대한민국 표준시)

# Prediction system for Inundation Area in Seoul

## 2. Road Weather

## Observation & NWP forecast

Road T.

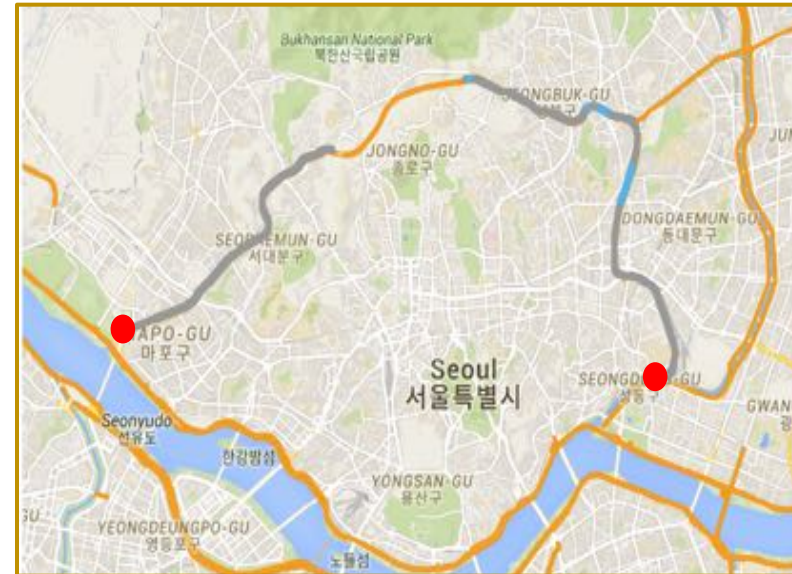

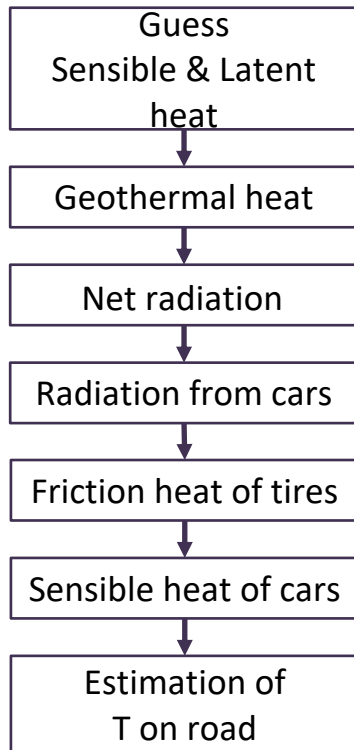

## Road condition (wet, dry, ice, snow)

## Service map

forecast

Heat balance model  
for road Temp.

Water balance model  
/ Machine running

# 2) Road Hydroplaning (water film thickness)

Observation (AWS)

interpolation →

Estimation of precipitation on roads

Hydroplaning zone

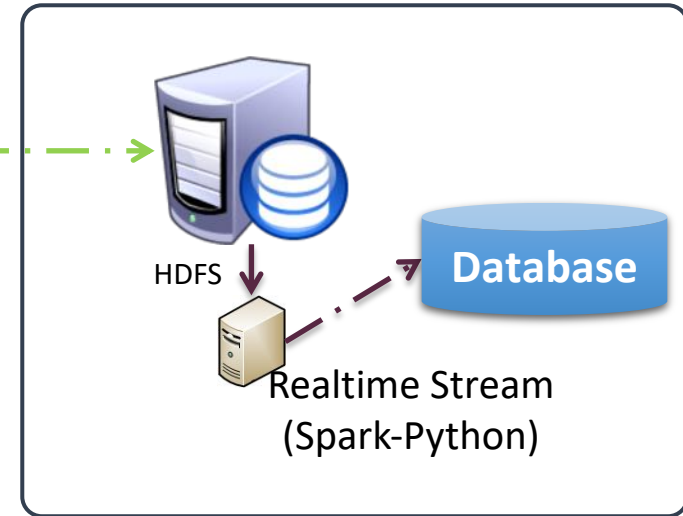

Precipitation

Road geometry  
(wide, # of lanes, height, cross-fall, vertical grade etc)

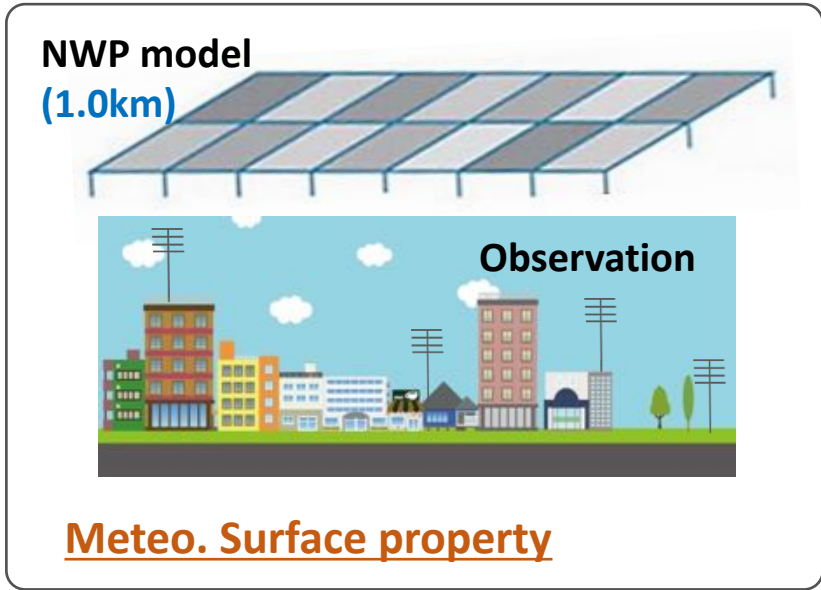

# OBD (Future work)

- To collect Temp. and Pres. in real-time basis from **OBD (On-Board Diagnostics)** installed in moving cars.
- It can be used to provide real-time Temp. in urban area, and to evaluate the estimated Temp. on roads

### 3. Urban Micrometeo.

## Climate Analysis Seoul (CAS)

Urban microclimate analysis model  
(10m-resolution)

which is able to analyze urban spatial characteristics in detail.

### Surface structure (GIS)

Slope,  $dx/dz$ ,  $dy/dz$ , Hollow depth, Aspect Ratio, Building(Vegetation) Height, Volume, Density, Complete Surface Area Ratio, Fractional Coverage of Land cover

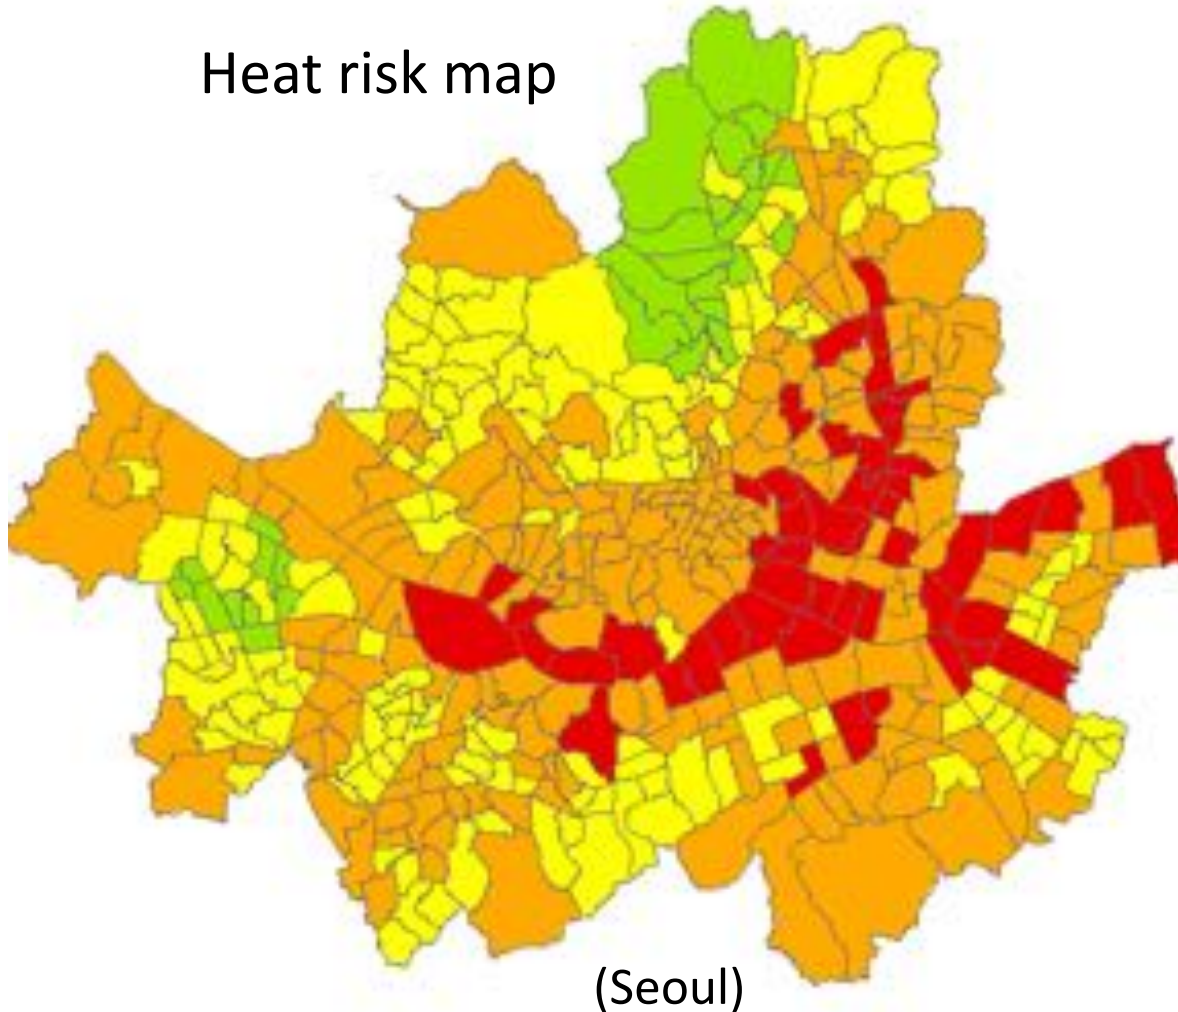

CAS: by National Institute of Meteo. Science (NIMS) and Technical University of Berlin

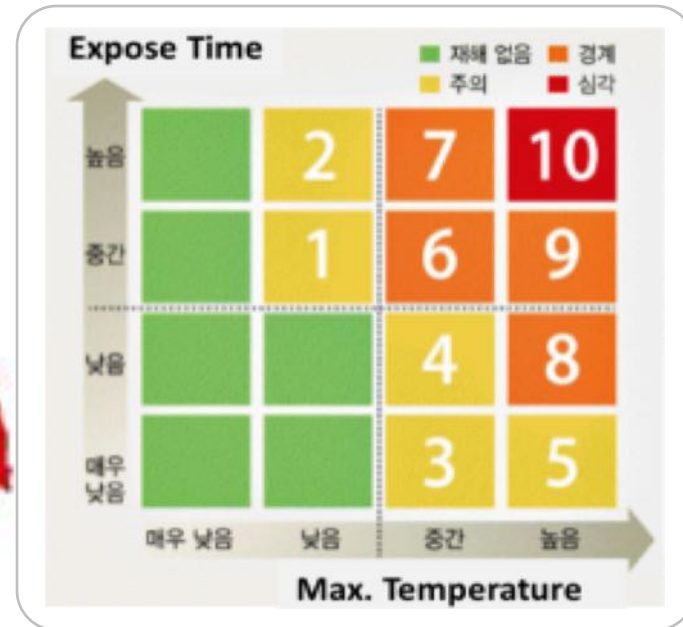

- Building-Resolving air Temperature (BRT) forecast

Heat risk map

Risk Matrix

Production of Surface Microclimatological /  
Micrometeorological Data  
(Wind, Humidity, Air/Radiation Temp., etc)

Weather Impact forecasts

Urban policy support

Public service

# 4. Urban Ecology

Forecast using meteorological observation/prediction data and ecological environment

- Mosquito collector : 50 by City of Seoul, and 3 by WISE
- Method: Random forest (Machine Learning)

▪ Category:

- Comfortable
- Concerned
- Beware
- uncomfortable

**Thank you for listening!**
