# Testing Framework in JEDI

Maryam Abdi-Oskouei

In collaboration with the JEDI core team

*maryamao@ucar.edu*

mer-a-o

@maryamabdi7

JCSDA Workshop, May 30<sup>th</sup>, 2019

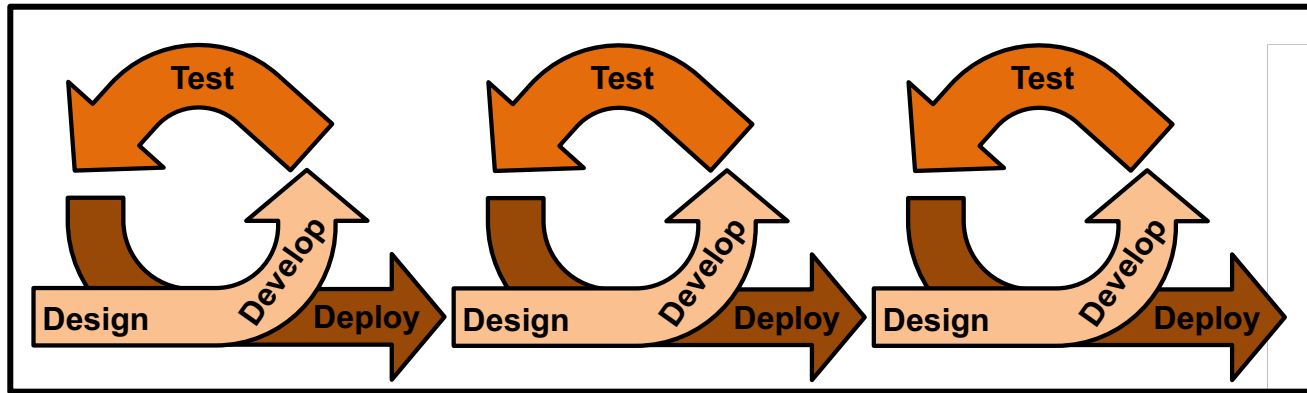

# Agile methodology enables the key stakeholders and developers to collaborate more closely to accelerate delivery

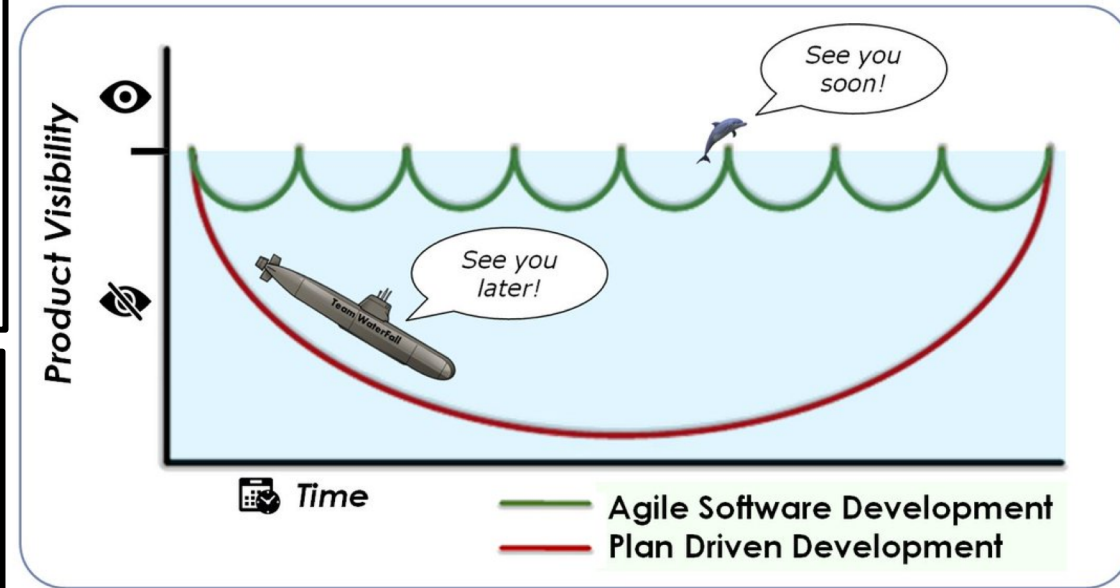

- Iterative development
- Requirements and solutions evolve through collaboration between self-organizing cross-functional teams

Agile

Waterfall

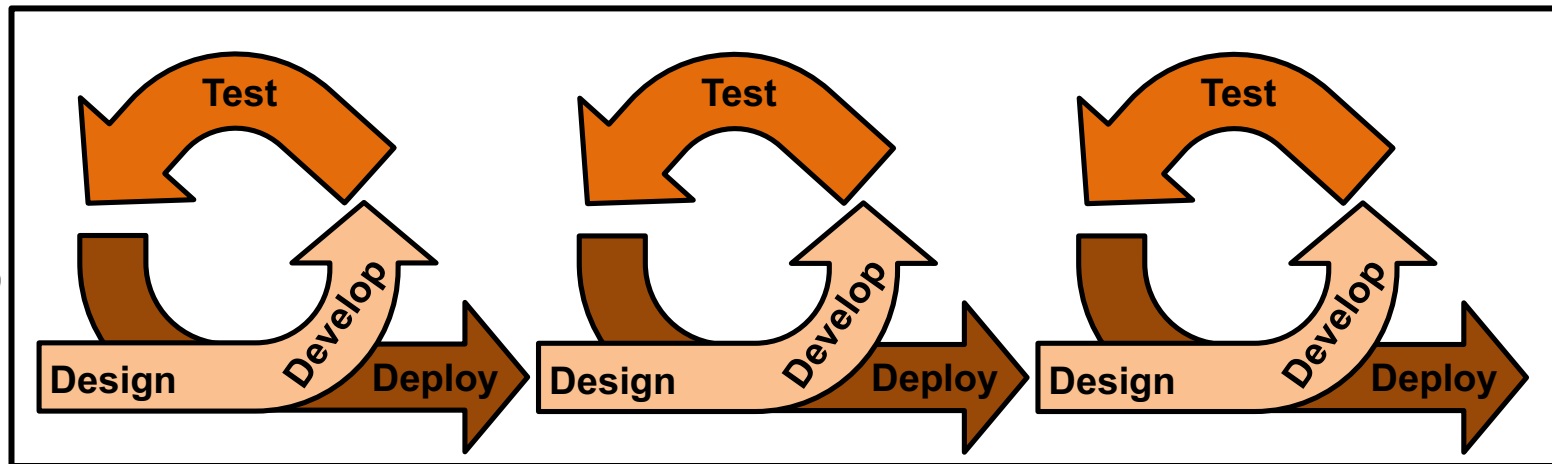

# Testing is one of the key components of Agile methodology

Agile testing:

- Continuous process
- Continuous feedback
- Issues are fixed within the same iteration

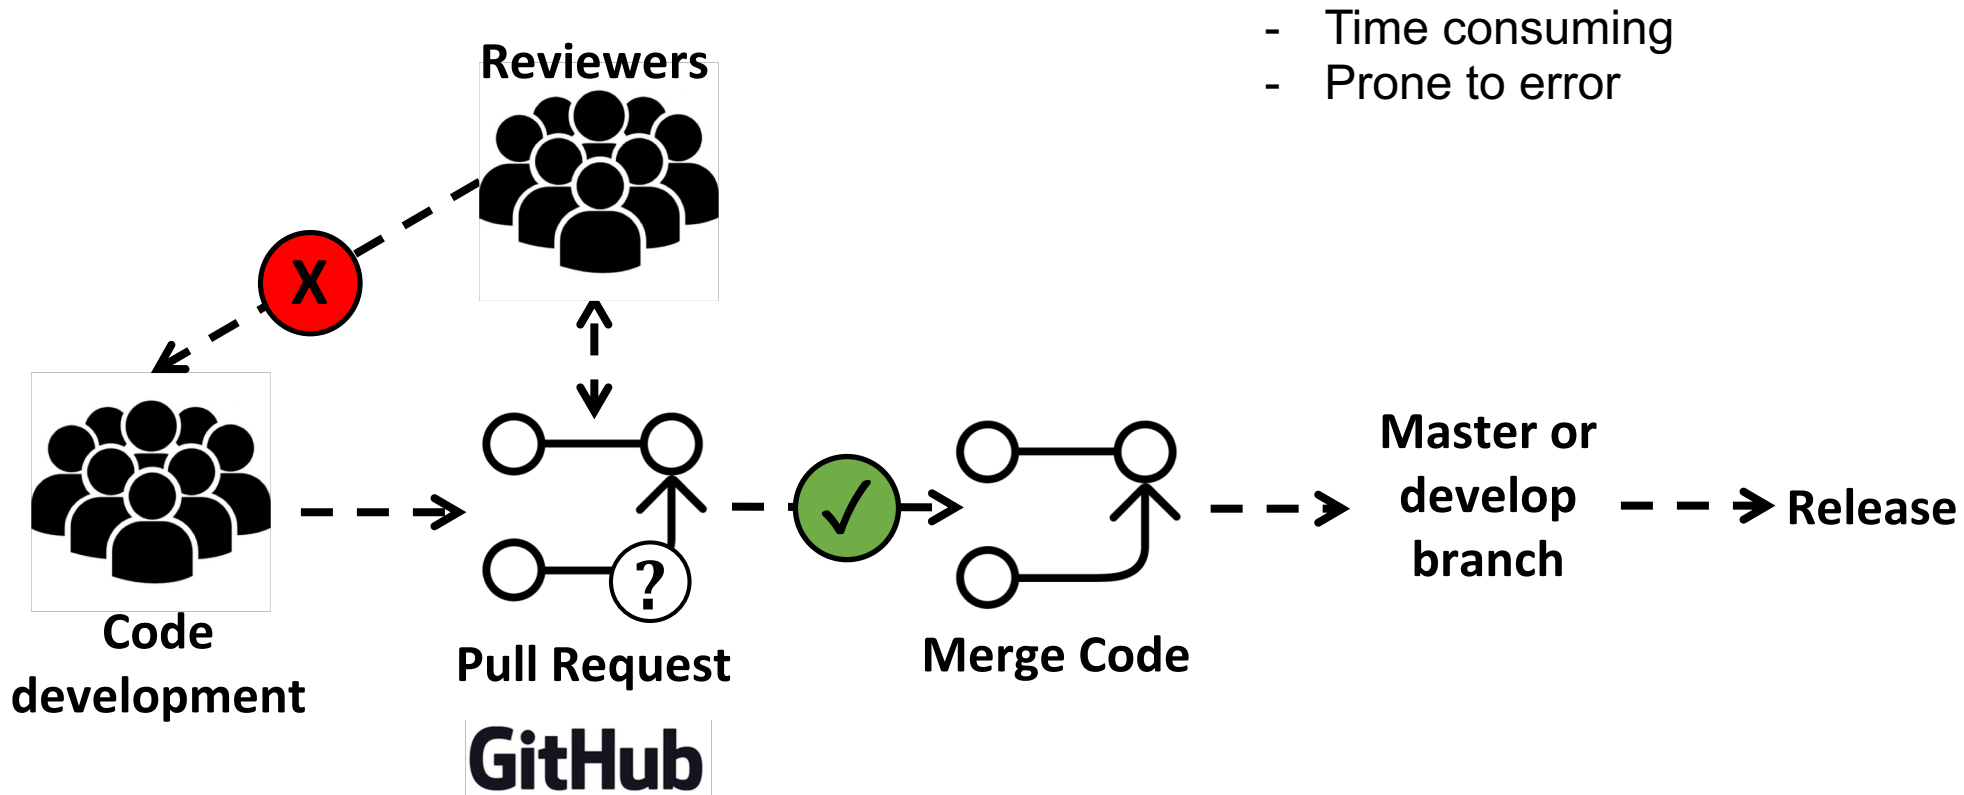

# Test suites in JEDI

1. Unit tests (*Boost C++ libraries is removed and replaced with eckit; you don't need to compile BOOST!*)
  - Evaluate Boolean expressions during the execution of some particular component of the code
  - Is the input correct?
  - Does some measure of the State norm agrees with a known value within some specified tolerance?
  - Is this particular variable positive?
2. Integration and system tests (Application tests)

# Testing Workflow in JEDI

# Automated Testing Workflow in JEDI

Travis CI

- Run tests automatically with a new pull request or a new commit to an existing pull request
- Using Docker images, you can test different builds
- Run tests on AWS or HPC
- Schedule Cron jobs

Code development

Release

# Travis-CI pieces in JEDI GitHub repo

## Travis-CI currently on OOPS and UFO repositories

Code added to repositories:

### **.travis.yml :**

- sets travis-ci environment
- builds and runs Docker image using the latest Docker image on DockerHub
- builds repo inside the container
- runs ctests inside the container and generates reports needed for CodeCov
- uploads reports to CodeCov

### **Dockerfile :**

- builds tools that are not already on jcsda/docker:latest
- customizes the container

### **default-mca-params.conf:**

- helps solve the problem with running mpi on docker container and oversubscription setup

### **.codcov.yml**

# Example of Travis-CI interface in OOPS

# In progress:

- Implement Travis-CI on all JEDI repositories
- Add test dependencies to the testing workflow
- Adding more application tests to increase test coverage
- Schedule Cron jobs on AWS to run computationally expensive jobs periodically
